EXPERIENCE

Roblox May 2026 - August 2026
Software Engineer Intern San Mateo, CA

- Shipped reversible archiving for Developer Products and Game Passes across two C# services (gRPC, REST) and a React/TypeScript UI, giving creators their **first** way to prune catalogs of **tens of thousands of items**.
- Built bulk archive, server-side filtering, and a reusable multi-select toolbar, letting creators archive **50 products at once** instead of one at a time, since reused by the team for bulk pricing.
- Extended a purchasing-status field read **org-wide** to carry a third archive state instead of adding a new field, shipping to production with no data migration and no downstream code changes.

Rundoo January 2026 - April 2026
Software Engineer Intern Redwood City, CA

- Built Rundoo's **first gift card product** across web and mobile point-of-sale apps, including activation, redemption, balance tracking, and **2 default analytics reports**.
- Led a **40+ PR refactor** of the payments protocol buffer schema across Go, TypeScript, and React Native, staged behind feature flags for zero-downtime rollout and deleting **5,000+ lines** of legacy code.
- Built country-aware address validation with Canadian autocomplete, timezone geocoding, and regional tax rates to enable Rundoo's **first international market**.

Splunk May 2025 - August 2025
Software Engineer Intern San Francisco, CA

- Developed scalable Java Spring Boot REST APIs and UI workflows for on-call incident response workflows, reducing investigation time by **30x** on average.
- Built Java Spring microservices for runtime configuration of AWS ML pipelines, reducing parameter change deployment time by **99%**.
- Awarded **Most Impactful Intern Project** in Security Org for achieving the term's top efficiency gains.

Onsemi Sep 2024 - Dec 2024
Software Engineer Intern Waterloo, ON

- Built a language compiler using ANTLR4, reducing compilation time by **30%** and enabling the generation of **50+ core microcode configuration files**.

Siemens January 2024 - April 2024
Software Engineer Intern Toronto, ON

- Developed a C# display application with SQL Server backend for real-time parts tracking, reducing inventory lookup time by **96%** on average.

PROJECTS

MotiSpectra - ConUHacks 2nd Place 

- Built a real-time emotion and attentiveness analysis app with **Next.js**, **Python**, and custom **ML models**, integrating into Zoom/Meet/Teams at **97%** detection accuracy.

EDUCATION

University of Waterloo Sep 2022 - Apr 2027
Bachelor of Computer Science (Co-op), AI Specialization, **3.8 GPA, 87.5 CAV**

SKILLS

Languages	C#, TypeScript, Go, JavaScript, Python, Java, C++, SQL, Bash, C
Frameworks	.NET, React, Next.js, Node.js, React Native, Spring Boot, Django, gRPC/Protobuf
Tools	PostgreSQL, Docker, Kubernetes, AWS, Git, Linux, Grafana, Prometheus, Playwright
Concepts	Data Structures & Algorithms, Distributed Systems, Microservices, REST APIs, System Design, CI/CD
